Assignment 3.2 Manual Test

- Add jQuery:
  - When you click the "Add Comment" button to add a comment, you will see the button change text from "Add Comment" to "Working..".

  - When you click the "Reply" link on each comment, it will automatically focus you on the name field in the comment form.

- Post Comments Asynchronously:
  - When you click "Add Comment" (whether it is a new comment or a reply), the page loads the comment without refreshing the page. *Notice: at the top of the page, it is not refreshing but the "Add Comment" button says "Working.." so it is adding the comment without reloading the page.

- Load File Content Asynchronously:
    - You need to first select an Assignment to display in the top left column. The "Files" dropdown menu will then be updated with all the files from that assignment. Select the file you want to see and enter the correct credientals for SVN and hit the "Enter" button. The content from the selected file will pop up on the right in a new form (overwriting the general data from the assignment).

- Syntax Highlighting:
  - Syntax Highlighting will be automatically be applied to the source code loaded from the "Load File Content Asynchronously" section after it is completed. (see Load File Content Asynchronously image)
